1. NA indicates meteorological conditions during the measurement did not correspond with any modelled meteorological conditions and were not applicable for comparison.
2. IA is Inaudible. When site only noise is noted as IA, there was no noise from the source of interest audible at the monitoring location.
3. Site-only noise levels attributed to MCO, including modifying factors where applicable.
4. As detailed in the EPL, noise emission limits apply under all meteorological conditions except:
 - Wind speeds greater than 3 m/s at 10 metres above ground level; or
 - Stability class F temperature inversion conditions, and wind speeds greater than 2 m/s at 10 metres above ground level; or
 - Stability class G temperature inversions.
5. NA in last column means atmospheric conditions outside those specified in EPL, therefore criterion was not applicable.
